

Bio-D®

(25-hydroxyvitamin D₃)

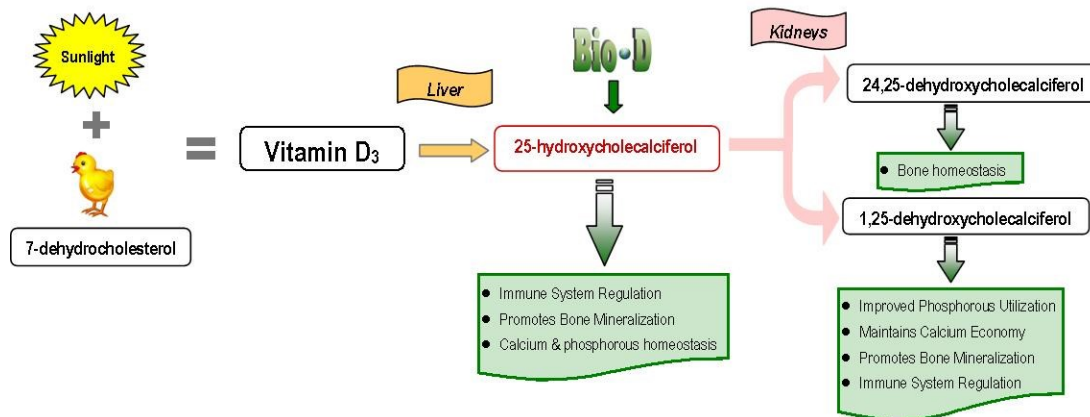

Bio D is a metabolite of vitamin D₃. Unlike Vitamin D₃ supplements, Bio D does not have to be processed in the liver after ingestion and absorption. This provides a more direct and available source of Vitamin D₃ in the blood serum. The increased bio-availability of Bio D also improves bone metabolism, productivity and overall health. Because Bio D bypasses the liver, it is not affected by hepatic disorders common in poultry, meaning that the active metabolites created in the kidneys are available to the bird very soon after ingestion.

Bio D is available as an ingredient, pre-mix or finished product. Bio D is available in both non-soluble and water-soluble forms and can be custom blended to meet your needs.

Benefits of Bio D

- ◆ Improved bone mineralization in young birds
- ◆ Optimizes calcium and phosphorous utilization
- ◆ Improved bone strength and growth
- ◆ Bone mass is maintained longer, reducing instances of osteoporosis
- ◆ Fewer skeletal and leg problems
- ◆ Greater weight gain and improved feed conversion
- ◆ Better eggshell quality, and therefore fewer broken eggs
- ◆ Hens produce more eggs and have an extended layer cycle
- ◆ Improved hatchability
- ◆ Aids in preventing cage fatigue in layers

How Bio D Works:

1383 Arcadia Rd, Ste 102
Lancaster, PA 17601
